

How Does Pricing Work?

Pricing is a tiered system:

- **Bid** price is a sum of all the **room** prices plus the shipping price and hotlist fee.
- **Room** prices are a sum of all the **product** prices.
- **Product** prices are a sum of all the product pricing formulas, attribute prices, and **modification** prices.
- **Modification** prices are a sum of any modification pricing formulas and attribute prices.

Pricing Breakdown

A product's pricing breakdown (see **Image 1**) can be viewed by clicking on the product price wherever it is visible (on product lists or the product editor). The pricing breakdown shows a breakdown of all the pricing that goes into the final price of the product, any green line items can be clicked to see a popup of the pricing formula and it's variables (see **Image 2**). If there are any errors in the pricing formula or any of it's variables, it will be outlined in red and will tell you the error in the formula breakdown.

Image 2. Formula Breakdown of Drawer Front Option Sum formula.

While in edit mode, all pricing formulas will be shown, even those that are \$0.00. By clicking the edit icon on the right end of the line item, the pricing formula editor will open for this pricing formula in a new tab (see **Image 3**).
