

Save Options

When editing an item, there are up to 5 save options to choose from, this article will explain in detail what each option does.

Save, create revision

The "Save, create revision" save option will save your current changes to the database and it will also create a cached version of this object for pricing purposes. [See the pricing document for additional information](#). For example, if you want to change a product's base price from \$100 to \$150 use this button to change the base price for any future bid.

Save, go to next

The "Save, go to next" save option will save your current changes to the database and go to the next item in the list to edit. This is useful if you are manually going through each item and making changes.

Save and continue editing

The "Save and continue editing" save option will save your current changes to the database and reload the item editor for the same item with your saved changes.

Save as new

The "Save as new" save option will **NOT** save your current changes to the database, it will create a new item based off the current item. If you have unsaved changes when clicking the Save as new option, those unsaved changes will be saved to the new item but not the original item.

Save and add another

The "Save and add another" save option will save your current changes to the database and open a new blank item editor to create another item.

Save

The "Save" save option will save your current changes to the database and returns to the list of items.

Revision #11
