

# Upgrade Server to latest Ubuntu version

```
sudo apt update && sudo apt full-upgrade -y
# needs reboot after update and before upgrade
sudo reboot
```

```
do-release-upgrade
```

```
# If you continue, an additional ssh daemon will be started at port '1022'.
```

```
# Answer yes to all questions other than when it asks to overwrite configuration files
```

```
# In this case overwrite everything other than the nginx files
```

```
# You will likely need to recreate the virtual environment
```

```
python3.11 -m venv env
```

```
# Start the services after reboot
```

```
systemctl --user start celery
```

```
systemctl --user start npm-homestead
```

```
systemctl --user start gunicorn-homestead-dev
```

```
# You might also need to re-enable the services...
```

```
systemctl --user enable SERVICENAME
```

```
# DB SERVER
```

```
# -----
```

```
sudo apt install postgresql-14
```

```
sudo pg_renamecluster 14 main main_backup
```

```
sudo pg_upgradecluster 12 main
```

```
sudo pg_dropcluster 12 main --stop
```

```
sudo pg_dropcluster 14 main_backup --stop
```

```
# PostgreSQL upgrade to new (Only applicable to database server)
```

```
# | Obsolete major version 12
```

```
# |
```

```
# | The PostgreSQL version 12 is obsolete, but the server or client packages are still installed. Please install  
the |
```

```
# | latest packages (postgresql-14 and postgresql-client-14) and upgrade the existing clusters with  
pg_upgradecluster |
```

```
# | (see manpage).
```

```
# |
```

```
# | Please be aware that the installation of postgresql-14 will automatically create a default cluster 14/main. If  
you |
```

```
# | want to upgrade the 12/main cluster, you need to remove the already existing 14 cluster (pg_dropcluster --  
stop 14 |
```

```
# | main, see manpage for details).
```

```
# |
```

```
# | The old server and client packages are no longer supported. After the existing clusters are upgraded,  
the |
```

```
# | postgresql-12 and postgresql-client-12 packages should be removed.
```

```
# |
```

```
# | Please see /usr/share/doc/postgresql-common/README.Debian.gz for details.
```
