

Upgrading to Python 3.11 & Latest Update

This page will be deleted and is pretty much only for notes.

```
sudo add-apt-repository ppa:deadsnakes/ppa
sudo apt update
sudo apt install python3.11-dev python3.11-full

# Create virtual env
python3.11 -m venv .env
activate .env/bin/activate
pip install -r requirements.txt

# Clean out old thumbnails
find homestead/media/CACHE/images -maxdepth 1 -mindepth 1 ! -name 'jobs' -type d -exec rm -frv
{} +
find homestead/media/CACHE/images -maxdepth 1 -mindepth 1 ! -name 'jobs' ! -type d -exec rm -v
{} +
rm homestead/media/CACHE/images/Jobs/None -rf

pm migrate

# Regenerate all thumbnails: use "--script-args clear" to remove the old cached files
pm runscript update_thumbnails --script-args clear

# Set COMBINE_COMPONENTS settings to True
```

Revision #7
